Config Vars

Config vars change the way your app behaves. In addition to creating your own, some add-ons come with their own.

Reveal Config Vars

Buildpacks

Buildpacks are scripts that are run when your app is deployed. They are used to install dependencies for your app and configure your environment. Find new buildpacks on Heroku Elements

SSL Certificates

SSL Certificates provide end-to-end encryption and integrity for all web requests to ensure information is transmitted securely.

Automated Certificate Management (ACM) is available for applications running on paid dynos to automate your SSL security.

Certificates acquired elsewhere may be configured using the Manual Certificate option.

SSL Certificates   **Configure SSL**

Upgrade to paid dynos to configure Heroku SSL

Domains

You can add custom domains to any Heroku app, then visit Configuring DNS to setup your DNS target.

Your app can be found at https://buger-queen-app.herokuapp.com/   **Add domain**

🔍 Filter domains

Custom domains will appear here

Custom domains allow you to access your app via one or more non-Heroku domain names (for example, `www.yourcustomdomain.com`)

Transfer Ownership

Transfer this app to your personal account or a team you are a member of. Learn more
